

# Connecting to USD Secure Tutorial for iPhone and iTouch

By: Frank Li

This tutorial was written to help those who have an Apple iPhone/iTouch that are tired of entering in your USD identification and password, and be connected automatically when you are on campus.

Follow the following steps precisely as shown below, or it will not work.

To begin, make sure you are on you're homepage of your device. Once you are there, click on the **Settings** button.

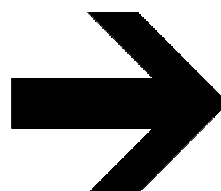

**Note: You might have to scroll to another page if your Settings button is organized somewhere else.**

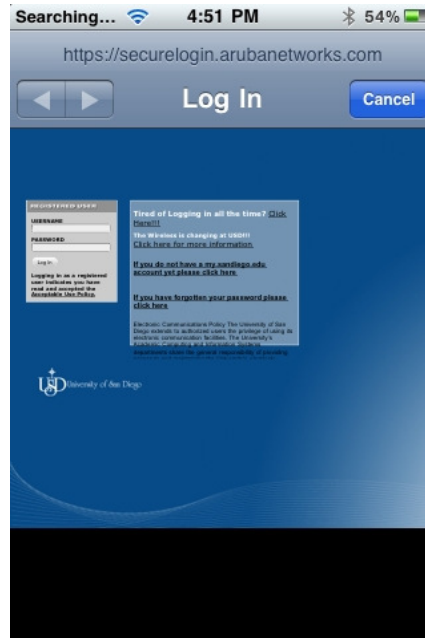

Once you tap on settings, you will be brought to a screen that looks like the one on the right. When your screen looks like the one on the right, tap on **Wi-Fi**.

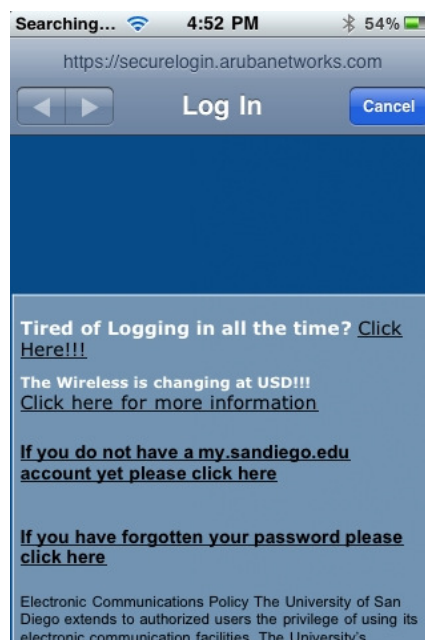

Your next step, tap on the network **usd**. Once it connects, it will have a check mark next to it, showing that you are connected to this network.

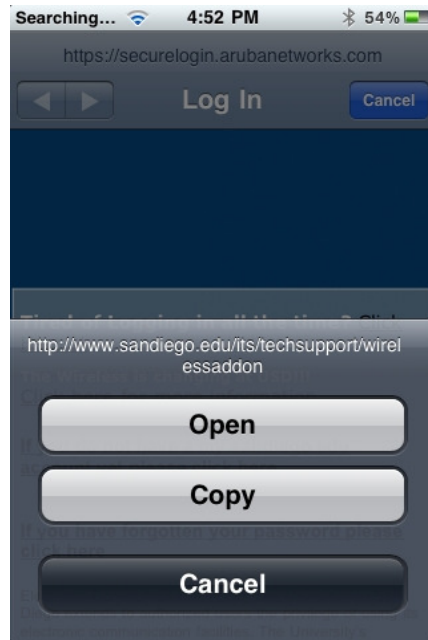

When you are connected, it will bring up the following screen. If this screen doesn't automatically popup, open Safari. This should make the screen automatically popup.

Once you are at that screen, **copy** the link **Click Here!!!**

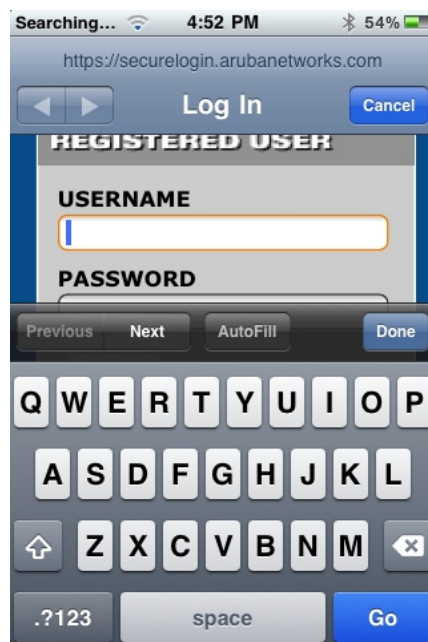

To **copy**, hold the link down until the follow screen pops up, and tap **Copy**.

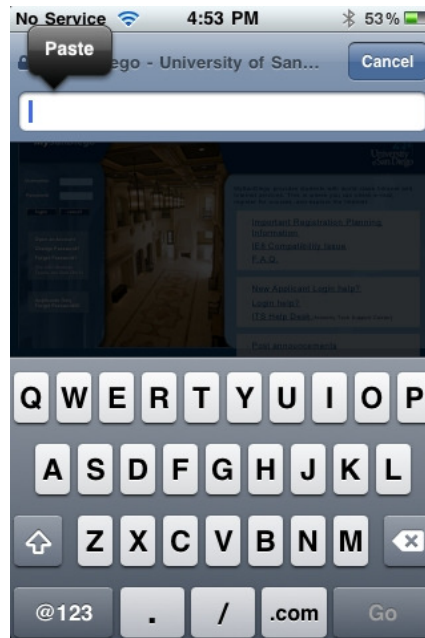

**Note: You must have at least firmware update version 3.0+, or you will not have the copy and paste feature. If you have an older version, we advise you upgrade, or copy down the follow link (<http://www.sandiego.edu/its/techsupport/wirelessaddon>) to be used later on in this tutorial. To learn how to upgrade your device, [click here](#).**

Once copied the link, login with your MySanDiego username and password.

When you are successfully logged in, **paste** the link you copied previously into the address bar in Safari. To paste, double tap the address bar and the following button will popup. Once the link is pasted in the address bar, click **Go**.

After you reach this page, tap on the link **usdsecure**.

Now the follow dialogue will popup, and tap **OK**.

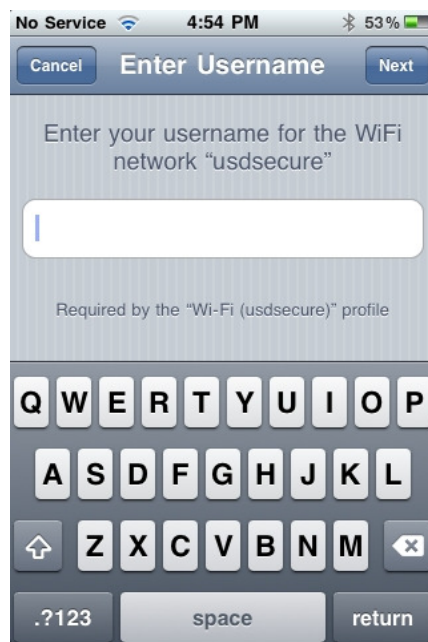

You will be brought to a screen that will give you the option to install a new profile to your device. To proceed with the process, tap **Install**.

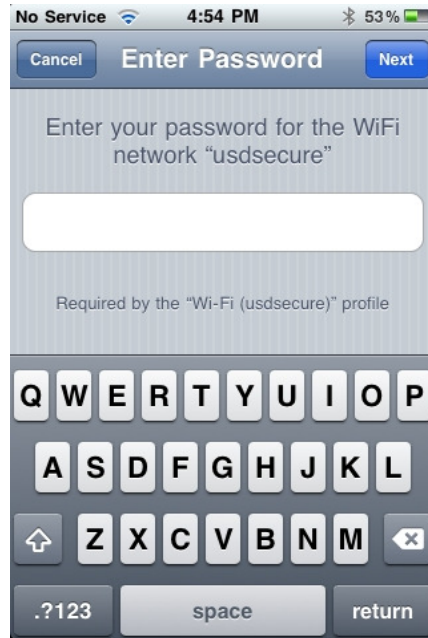

The following dialogue will popup on your device, and tap **Install Now**.

Your device will now ask you to enter in your MySanDiego username. **Enter** in your username and tap **Next** in the upper right corner.

It will now ask you to enter in your MySanDiego password. **Enter** in your password and tap **Next** located in the upper right corner once again.

Tap **Done** in the upper right corner to complete your new profile install.

If you get this screen on your device with a **checkmark** next to **usdsecure**, you have successfully connected to the **usdsecure** WI-FI network.

**Congratulations! That's it! You are now ready to use your iPhone/iTouch around campus using usdsecure network.**
